## LOCOMOTIVES

Dear PIKO G-Scale Friends,

We want to thank you sincerely for your loyalty and your enthusiasm in sharing the fun of G-Scale trains, whether indoors or outdoors on the garden railroad. Your passion for this hobby is what motivates our entire PIKO team to keep bringing you more great PIKO products.

Thanks to the dedication of our employees, we were able to reliably deliver many models in the past year while simultaneously developing exciting new projects. Fans of American trains will greatly enjoy the all-new technology of our steam locos with Tri-Mode Sound. For the first time ever, we're offering steam locos ready right out of the box for operation on your choice of traditional Analog DC, DCC Digital, or Onboard Battery Power with R/C. All with absolutely no modifications required!

European train lovers will delight in the big and thoroughly modern PIKO G-Scale model of the BR 248 Vectron Dual-Mode locomotive. The real thing is a technological marvel, able to operate either on electricity from overhead catenary, or onboard Diesel power. The model is also packed with exciting features. Just like the full-size locomotive of Northrail/WFL, this model debuts in the beautiful green paint scheme wearing PIKO logos. Many fans have been delighted to spot the real loco roaming the German rails.

2026 marks some very special occasions! Several new models feature authentic railroad logos to celebrate the 250<sup>th</sup> birthday of the United States. This year also marks the 20<sup>th</sup> anniversary of the very first PIKO G-Scale locomotive, the Taurus electric loco, introduced in 2006. Thanks to your support, many more locos and cars have followed since then and we look forward to fulfilling many more wishes in the future.

PIKO G-Scale buildings have been popular since the early 1990s and this year brings several more new models to help you build a growing G-Scale railroad empire.

If you're reading this, G-Scale trains may be your main interest, but PIKO also offers high-quality products in HO, N, and TT-Scales. Check out our website [www.piko-america.com](http://www.piko-america.com) for more info and be sure to follow us on social media. We love to hear from PIKO fans!

On behalf of the entire PIKO team around the world, we wish you lots of fun with your PIKO trains!

38280 CNJ 2-6-0 Camelback 375 Tri-Mode Sound

**The Famous Camelbacks of the CNJ!** The CNJ was one of several railroads in the Northeast that operated fleets of Camelback or Mother Hubbard locomotives, as they were nicknamed, with the cab straddling the boiler and a huge anthracite coal-burning Wooten-type firebox behind the cab. Number 375 was one of a group of long-serving CNJ Camelbacks with a 2-6-0 wheel arrangement.

### Tri-Mode Sound, Another First from PIKO!

Steam locos with smoke and digital sound, factory-equipped for operation on:

- DC Track Power
- DCC Digital
- Onboard Battery Power with R/C

For easy Battery R/C operation, insert (10) AA rechargeable cells (not included) into the battery clip in the tender. Non-rechargeables will give poor performance and are not recommended! 2800 milliamp-hour rechargeables are readily available and should give over two hours of run-time with smoke on and sound at full volume.

Or, connect standard 14.8V or 18.5V 3400 milliamp-hour rechargeable lithium battery packs, available from various G-Scale retailers, to the industry-standard JST connector socket, for many hours of run-time. 14.8V packs should give all the top speed you need. 18.5V packs can give a bit longer run-time.

Control speed, direction, emergency stop, bell and playable whistle on Battery R/C operation with the included PIKO R/C Pocket Remote.

Both DC and Battery operation offer a wealth of automatic digital steam sound features, like exhaust chuff, air pump, and more. Bell and whistle can also be activated by track magnets, such as PIKO #35268. KeepAlive® technology keeps everything running smoothly even over dirty track on DC/ DCC power, and provides standstill sound in all three modes.

DCC operation offers even more features, plus all the benefits of TCS WOWSteam Sound. Choose from numerous bells, whistles, exhaust chuff sounds, and more! Audio Assist® easily guides you through programming without the need to memorize CVs. Sound choices made on DCC also remain in effect on DC or Battery R/C operation.

**WOWSteam**

## CARS

Available for all American freight and passenger cars:  #36164

**US Semiquincentennial!** Coast-to-coast, you can celebrate the 250<sup>th</sup> Birthday of the United States on your railroad for years to come, with these cars featuring authentic railroad logos, such as Old Glory and Lady Liberty.

37470 NorthRail/PIKO/WFL VI BR 248 Vectron Dual Mode

37471 NorthRail/PIKO/WFL VI BR 248 Vectron Dual Mode, Sound

**Prototype and Model:**

Efficient on every track—the Vectron Dual Mode combines the best of both worlds: a modern dual-power locomotive that can run on both electric and diesel power. Flexible, powerful and environmentally friendly. Developed by Siemens Mobility and introduced in 2019, the Vectron Dual Mode is a future-proof design that represents the next step in modern rail transport—a strong link between tradition and progress.

The completely new PIKO model of the BR 248 debuts in the attractive Northrail/WFL livery featuring PIKO logos, just like the real loco that runs on German rails. The many features include:

- Openable cab doors
- Many separately applied details
- See-through grilles
- Lighted control stand
- Digitally operated pantograph (37471 only)
- Digitally-controlled cab and engine room lighting, plus motorized fan (37471 only)
- Digitally-operated couplers (37471 only)
